EBA-21(22)-PB(PB2)

TECHNOLOGY

New central processing units (CPU) equip the EBA-21/22 with state-of-the-art software. Straightforward software upgrades are possible at the site of the machine by replacing the EPROM. This makes it easy to keep any machine always up to date. The EBA-34 has an acceptance rate of more than 95% thanks to its automatic centering mechanism.

EB-200

SECURITY

JCM's pullback mechanism (PB) offers the highest possible security. The PB-Unit ensures that inserted banknotes are firmly pulled into the acceptor once they have been accepted. Thus, banknote fishing is nearly impossible. Regular software updates ensure high acceptance rates and secure counterfeit rejects.

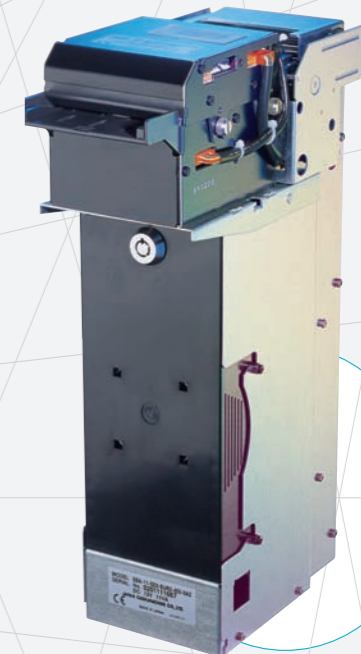

THE WORLD'S BANKNOTE HANDLING SOLUTION

Security. Technology. Solutions.

With our EBA-Series you have the choice.

EBA-32/34-SD3

EBA-21-SD2

SOLUTIONS

Its special design makes the EBA-Series suitable for a wide range of applications – they can be integrated into gaming machines, vending machines, retail applications, parking solutions and many more. EBA-21 and EBA-32/34 are available with or without lockable cashboxes, the EB-200 has an integrated cashbox with front or back access.
